Our Candidates

Nicolas Kämmerer

List position 1

„Overcoming differences and pulling together. That's the way local politics has to be worked out to make an innovative city also sustainable. Unification instead of polarization is on the ballot on March 14!“

Jana Wilke

List position 2

„I want a Darmstadt for everyone, therefore: transparent politics, so that citizens can get involved. Advance digitalization, for a barrier-free Darmstadt. Sustainable development, so that the city remains livable.“

Frederik Jobst

List position 3

„I want to initiate policies today that will ensure that we will call Darmstadt our livable home tomorrow. European pioneers like Copenhagen show us that climate protection and quality of life go hand in hand.“

Ana Lena Herrling

List position 4

„Volt's task is to better integrate Darmstadt into Europe in order to make better use of the diversity of the community of states. In doing so, equal opportunities, tolerance and transparency in political work are very important to me.“

Volt

Future Made in Europe

Local elections
March 14, 2021

#VoteVolt

Darmstadt's future

Volt brings new excitement to politics:
from Darmstadt to Europe.

We know that we can overcome the great challenges of our time only together. Our goal is a future in which everyone has a voice that is heard.

We do not think in terms of right or left, but look for answers that are based on facts and address the core of the problems.

Our strategy: Best Practices!

This means that we look for exemplary solutions from politics and society throughout Europe and transfer them to other countries, regions or cities.

Join us in shaping the Darmstadt of tomorrow!

... a climate oasis!

We demand the complete decarbonization of the city

- City economy CO2-free by 2035
- Achieving the goals of the climate strategy by consistently intervening when goals are missed
- Use available European and national funding, because climate protection must not fail because of money

We want to create a climate oasis

- Greening the city with a plan: for insect protection and against pollen count

- Green roofs, green facades: We let nature cool for us and don't heat up the city with more and more air conditioning.
- For a Darmstadt forest that is bursting with biodiversity and thus defies climate change

- Systematically identifying and promoting potential for ecological redensification, taking European pilot projects as a model.
- Innovative urban development concepts for transformation instead of expansion.

... a mobile city!

Without public transport and bicycles, no one can reach the climate goal.

- Make bicycles and public transport the main means of transport by expanding the infrastructure.
- Public transport: cheaper and faster through automation
- Park+Ride stations connected to the public transport system
- Introduction of a DA mobility app for all Darmstadt residents and the surrounding area

... a city for all!

Long-term protection against excessive rents

- A housing offensive with a strategy to sustainably improve the housing situation and quality of life.
- Bauverein AG as a socially responsible landlord
- New, affordable housing creates life for young families, students and retirees.

... a community!

Create transparency

- City council meetings for all, live and on demand.
- Open Government Data: easy and user-friendly access to parliamentary information.

Strengthen citizen participation

- broader publicity and more public relations work
- Design low-threshold offerings, e.g., through better digital platforms

Making Darmstadt a true European digital city

- Open Public Data: public data as an economic factor and innovation driver

Many ideas, so little space
